# Introduction

The company Media Bazaar is planning to open their very first shop in Eindhoven. Administration is struggling with management of the company. The biggest challenge that Media Bazaar's management foresees is keeping track of their employees, products, work shift scheduling and department management. Receiving a structured statistical information.

As a team of 4 members, we will work to deliver a working application that will help the company fix its problems.

## Client

Our client is Andre Postma, a representative for the hardware store "Media Bazaar", funded by the parent company "Jupiter". The company needs an effective solution to manage employees and stock, view statistics, give access to certain data and features after authorization as well as to be expandable with additional features in the future if this first phase is considered a success.

Client: Andre Postma, manager at Media Bazaar

Email client: a.postma@fontys.nl

## Team

Teammate	Number	Role	Email
Andrei Sava	4229258	Developer/ Designer	a.sava@student.fontys.nl
Andreea Sindrilaru	453277	Developer/ Designer	a.sindrilaru@student. fontys.nl
Bohdan Tymofieienko	4132645	Developer / Team leader	b.tymofieienko@student. fontys.nl
Stelian Rumenov	3628140	Developer/ Minute taker	413549@student.fon tys.nl

### *Contact person:*

*Bohdan Tymofieienko, b.tymofieienko@student.fontys.nl*

## Current situation

“Media Bazaar” is a new hardware store, funded by “Jupiter”, is opening their first store located in Eindhoven and they intend to be as prepared as possible. Their management foresees keeping track of

employees and products as their biggest challenge.

Currently several disconnected solutions are being used, such as Excel sheets, papers etc. which would not be sufficient for the new store.

Therefore they want to hire a team of software developers to develop an administrative system that allows its users to manage and keep track of employees and products.

The system is intended to be used by management and administration initially, with future expansion and the addition of a dedicated website for the employees.

There are competitors working on the similar solutions.

## Problem description

The client has a problem with the data management. “Media Bazaar” does not have an information system to manage their business processes neither a structured and organized approach of collecting and keeping statistical data.

# Project goal

## *Waterfall phase:*

The goal of this project is to improve the efficiency and productivity of “Media Bazaar’s” management and administration staff by creating, testing and deploying a desktop application within the first phase, called Waterfall phase, which lasts 6 weeks.

Academic goal is to extend team knowledge and acquire practical experience with software development.

## Deliverables for Waterfall Phase

The team will deliver the following:

1. A desktop application that meets the client’s requirements: keeping track of their employees, products, work shift scheduling and department management, collecting a statistical information.
2. Project plan describing how the 6 weeks of time will be used
3. URS document with functional requirements, wireframes etc.
4. Presentation and demo at the end of the 6 weeks (week 6 being 22<sup>nd</sup>-26<sup>th</sup> March)

## Non-deliverables

The team will not deliver the following:

1. Workshops on working with software for staff.
2. Any kind of hardware

## Constraints

Constraint	Description
Fixed deadline	Everything we have agreed to deliver to the client must be completed before the deadline in the sixth week (22nd-26th March)
Software tools	The application must be developed using C# and the .NET framework
Methodology constraints	Using the Waterfall methodology for this phase, all information the team needs must be gathered within the first phases of the project (Note: this information is intended for the first 6 weeks of the project (until March 25-28). Later more information will be added)

## Risks

Risk	Description	Impact	Mitigation strategy
Teammate dropping out	A teammate leaves the team due to dropping out of university	HIGH	Frequent communication in order to be informed as early as possible and re-distribute tasks
Project scope and purpose not defined clearly enough	During the information gathering phase the requirements are not fully understood	HIGH	Clear client communication with detailed question, no assumptions and making sure all teammates

			are well informed about every project aspect
Technology change	The underlying technology on which the system is built is superseded by new technology	LOW	Avoiding the use of third-party extension and libraries which might not be useable after updates related to C# and the .NET Framework
Time	Running out of time due to unforeseen circumstances	HIGH	Contact client and tutor as soon as possible to describe situation and adjust requirements

# Communication plan

To ensure proper communication, clearly understood requirements and quick reaction time in cases of unforeseen circumstances the team communicates on Discord daily, alongside the weekly meetings with the tutor. Also, an informal meeting is held at the start of the week (Monday or Tuesday) to distribute the tasks for the week.

## *Communication with client:*

During the Waterfall phase we will initially meet the client to gather all the needed information via MS Teams, use emails if any questions arise and to send deliverables before final presentation (such as documentation, agendas, minutes etc.)

# Phasing

## Waterfall phase:

### 1) Phase 1.1: Project analysis

Activities:

- i) Analyze client's problem.
- ii) Analyze current approach of dealing with the problem.
- iii) Work out the effective solution for the problem.

Deliverables:

- i) Project plan.

Description: In this phase team is focused on analyzing reasons and consequences of the current problem. Conducting the applied research and preparing the possible solution that fits with existing business processes is main priority.

Milestone: Project approval.

Due: February 28<sup>th</sup>.

## 2) Phase 1.2: Design

Activities:

- i) Design software architecture.
- ii) Make UML class diagram.
- iii) Design a GUI wireframes.
- iv) User Requirements Specification.

Deliverables:

- i) User Requirements Specification.

Description: In this phase team designs and implements the solution. This includes design of the software architecture and data model design. Main priority in this phase is to strictly follow the targets set in the previous phase while working on the solution.

Milestone: Design approval.

Due: March 7<sup>th</sup>.

## 3) Phase 1.3: Implementation

Activities:

- i) Implement solution based on UML class diagram
- ii
- ) Create GUI based on design.

Deliverables:

- i) Interim version of the solution.

Description: In this phase team designs and implements the solution. This includes implementation of the software architecture and data model design. Main priority in this phase is to strictly follow the targets set in the previous phase while working on the solution.

Milestone: Interim approval.

Due: March 14<sup>th</sup>.

#### **4) Phase 1.4: Testing**

Activities:

- i) Create test plan.
- ii) Test the software.
- iii) Improve the software based on feedback.
- iv) Create test report.

Deliverables:

- i) Test report.

Description: In this phase software test are done. Team works on improvements based on feedback. Main priority in this phase is the reliability of the software.

Milestone: Pre-final approval.

Due: March 21<sup>th</sup>.

#### **5) Phase 1.5: Presenting**

Activities:

- i) Deliver final version of the application to the client.
- ii) Present the solution.

Deliverables:

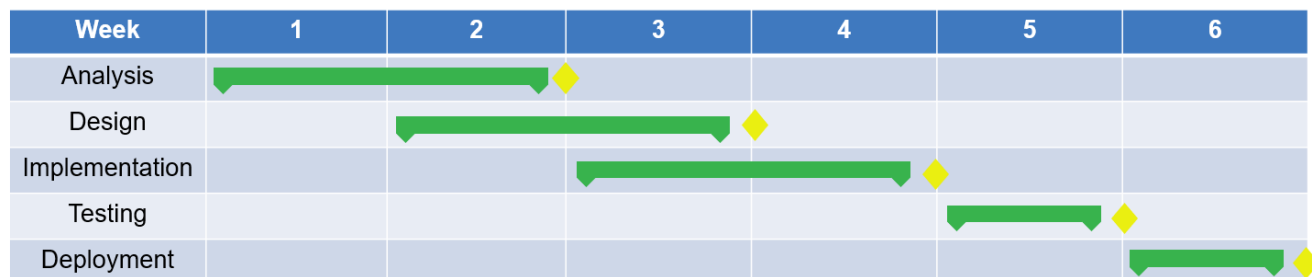

- i) Software application.
- j) Presentation of the product.

Description: In this phase team deliver the release version of the software solution to the client. Team presents the product. Main priority is to correctly present the product to the client.

Milestone: Final approval.

Due: March 25<sup>th</sup>.

## Gantt table

## Revision history

### Project plan version 0.1 - 22/02/2021

Editing by Stelian based on feedback from tutor meeting (23/02/2021) - 25/02/2021

### Project plan version 0.2 - 26/02/2021

Edited by Bohdan. Styled the document and small changes - 26/02/2021

### Project plan version 0.3 - 28/02/2021

Edited by Bohdan. Added Gantt table and fixed some typos - 28/02/2021

### Project plan version 0.4 - 01/03/2021

Edited by Stelian. Based on feedback from tutor and client from  
01/03/2021

### **Project plan version 0.5 – 01/03/2021**
